

Console Services for Organbuilders

Expert factory installation of Peterson equipment

Nameboard and Stop Jamb Rebuilding and Replacement

Did you know that Peterson's Console Services Department can refurbish or replace complete stop control panels for your console rebuild project? Utilizing this service is often an attractive and surprisingly cost-effective alternative to fabricating hardwood panels and fitting stop controls, nameplates, control panels and indicators in your own shop.

Older nameboards and stop jambs can be refinished and modified to accept updated equipment, or brand new panels can be constructed to your exact specifications and beautifully finished to match your color sample. All installed Peterson products are fully wired, final-adjusted, and tested for flawless operation.

With updated stop control panels and a Master Touch II™ keyboard assembly complete with cheeks, slips, and pistons, an older console will acquire a remarkably fresh new look and "feel" at an affordable cost.

Complete Console Rebuilding Services

In addition to nameboard and stop jamb services, Peterson offers organbuilders the option of having a console totally rebuilt. The process starts with thorough cleaning and either careful touch-up or complete refinishing of the console shell, followed by the installation of all required equipment. This may include fitting stop controls; new manual keyboards or key contacts; switching, combination action, and MIDI equipment; expression and crescendo shoes or new reed switch contacts and encoder; control panels (*in hide-away drawers where desired*); indicator lights and bar graphs; pedalboard contacts; nameplates and engraved labels; and toe studs.

Any special structural or cosmetic modifications can be artistically carried out as needed. Pedalboards may be fitted with new key caps and re-bushed where appropriate. Consoles are then neatly cabled and thoroughly tested by the people who know Peterson equipment best of all. A comprehensive final inspection assures an impressive fit and finish that reflects painstaking attention to detail.

Since every console rebuild project is unique, please contact the Peterson customer service department for pricing and more details.
