# Pedal Key Contact System

## Model PKC-32

**Peterson is pleased to introduce a fully self-contained, magnetic reed switch-based key contact system for organ pedal boards.**

Quick and easy to mount on virtually any pedal board, this contact system will never go out of adjustment due to keys having too much side play. Reed switch contacts are housed in a durable plastic enclosure to prevent breakage.

Order Peterson's familiar plug-on magnet wire cables and junctions, or choose a lower-cost option and wire the contacts yourself. Prototypes have been successfully tested for 2 million operations on an actual pedal board!

**Part # 415350:** Kit of 32 contact assemblies with no cables and no junction

**Part # 415351:** Kit of 32 contact assemblies with junction, quick set-up LEDs, and cables

(Both kits include locating tool, and all mounting hardware)

# Pedal Key Contact System: Model PKC-32

**Kit #415350** includes 32 self-contained reed switch contact assemblies; felt pads with permanent adhesive backing; locating tool; and mounting screws.

**Kit #415351** includes all items above plus a junction board with LEDs for easy, silent speak-point adjustment; a plug-on magnet wire cable to connect each note's contact assembly to the junction; and a 10 foot jumper cable from the junction to the input pins of Peterson switching systems.

### FEATURES

- \* Fully self-contained contact assemblies for each note
- \* Reed switch and permanent magnet work together in the ideal configuration
- \* Black plated phosphor-bronze flat spring holds permanent magnet in correct proximity to reed switch
- \* Reliable operation even with pedal keys that have significant side play
  - \* Simple to mount to a cross rail under the center of pedal keys
  - \* Reed switch contacts are encased in plastic to resist breakage
  - \* Simple speak-point adjustment
- \* Convenient pre-cabled version and lower cost cable-it-yourself options
  - \* Locating tool and mounting hardware included
  - \* Proven in testing for 2 million operations
